EM 1110-1-4015

Manual
No. 1110-1-4015

28 August 2009

Engineering and Design
DESIGN: IN SITU THERMAL REMEDIATION

Table of Contents

	Paragraph	Page
Chapter 1. Introduction		
Purpose.....	1.1	1-1
Applicability	1.2	1-1
Distribution Statement	1.3	1-1
References.....	1.4	1-1
Background.....	1.5	1-1
Scope	1.6	1-4
Organization.....	1.7	1-4
Chapter 2. Underlying Physical Principles and Technology Descriptions		
Fundamental Principles.....	2.1	2-1
Technology Descriptions	2.2	2-21
Unavoidable and Potential Effects.....	2.3	2-38
Chapter 3. Site Characterization for ISTR Technology Screening and Design		
Introduction.....	3.1	3-1
Data Collection Requirements to Support Remedy Selection and Design	3.2	3-1
Site Physical Properties and Site Conditions.....	3.3	3-1
Chemical Analyses and Contaminant Properties.....	3.4	3-4
Data Needs Specific to each Technology	3.5	3-5
Evaluation of Biological Degradation Potential	3.6	3-10
Chapter 4. Technology Screening and Feasibility Studies for ISTR		
Introduction.....	4.1	4-1
Identify Remedial Action Strategies.....	4.2	4-1
Measures of Success for ISTR	4.3	4-5
Feasibility Evaluation Flow Charts.....	4.4	4-6
Evaluation of Short-Term Impacts of ISTR.....	4.5	4-8
Chapter 5. Bench- and Pilot-Scale Studies		
Introduction and Considerations in Determining Testing Approaches	5.1	5-1
Thermal Conductive Heating	5.2	5-3
Electrical Resistivity Heating	5.3	5-7
Steam Enhanced Extraction	5.4	5-8

	Paragraph	Page
Chapter 6. Design Considerations		
Introduction and Overall Design Strategy	6.1	6-1
Thermal Conductive Heating	6.2	6-1
Electrical Resistivity Heating	6.3	6-15
Steam Enhanced Extraction	6.4	6-19
Waste Stream Treatment Options	6.5	6-23
Other System Considerations.....	6.6	6-30
Modeling	6.7	6-32
Chapter 7. Cost and Performance Results		
Introduction.....	7.1	7-1
General Observations.....	7.2	7-1
Technology-Specific Applications	7.3	7-3
Chapter 8. Performance Monitoring and Operations and Maintenance (O&M)		
Subsurface Monitoring for ISTR Technologies.....	8.1	8-1
Operations and Maintenance for ISTR Technologies.....	8.2	8-6
Chapter 9. System Shutdown and Confirmation of Cleanup		
Introduction.....	9.1	9-1
Shutdown Strategy	9.2	9-1
Shutdown Criteria	9.3	9-2
Confirmation of Cleanup	9.4	9-7
Chapter 10. Other Issues		
Patent Issues.....	10.1	10-1
Safety	10.2	10-1
Community Acceptance and Education.....	10.3	10-2
Contracting.....	10.4	10-4
Equipment Purchase, Operations and Maintenance	10.5	10-5
Regulatory Issues	10.6	10-6
Appendix A. References.....	A-1	
Appendix B. Case Studies.....	B-1	
Appendix C. Example Checklists.....	C-1	
Appendix D. Example Table of Contents for Operations Manual.....	D-1	
Glossary.....	Glossary-1	

List of Tables

	Page
Table 2-1. Rate of Hydrolysis by Compound and Temperature.....	2-6
Table 2-2. Thermal Properties of Representative Materials and Fluids.....	2-7
Table 2-3. Select NAPL Compounds and Steam Co-Distillation Points.....	2-9
Table 2-4. Generally Recognized Optimum Growth Range for Various Groups of Microorganisms.....	2-18
Table 2-5. Redox Processes that Consume Organic Matter and Reduce Inorganic Compounds in Groundwater.....	2-20
Table 2-6. Nominal Upper Bound Temperatures Achieved for Various ISTR Technologies.....	2-22
Table 6-1. Groundwater Treatment Technologies.....	6-26
Table 6-2. Vapor Treatment Technologies.....	6-28
Table 6-3. Applicability of Models to Individual Technologies.....	6-35
Table 6-4. Features of numerical modeling codes.....	6-36
Table 7-1. Summary of Completed Thermal ISTD TCH Projects.....	7-4
Table 7-2. Summary of Selected ERH Projects.....	7-5
Table 8-1. ISTR Monitoring Summary.....	8-10
Table B-1. Summary of Steam Injection Projects.....	B-29

List of Figures

Figure 2-1 Aqueous Solubilities of Trichloroethylene and Tetrachloroethylene as a Function of Temperature.....	2-1
Figure 2-2 Calculated Aqueous Solubility of Naphthalene as a Function of Temperature.....	2-2
Figure 2-3 Vapor Pressure of Selected Compounds vs. Temperature	2-3
Figure 2-4 Vapor-phase Concentrations of Trichloroethylene and Tetrachloroethylene as Functions of Temperature.....	2-4
Figure 2-5 Henry's Law Constants vs. Temperature for Various Compounds.....	2-5
Figure 2-6 Conductive Heating of 1-, 2-, and 3-m Thick Impermeable Layers from both Sides.....	2-7
Figure 2-7 Thermal Conductivity and Specific Heat Capacity of Dry Silty Sand vs. Temperature.....	2-8
Figure 2-8 Viscosity vs. Temperature for Liquids.....	2-11
Figure 2-9 Density vs. Temperature for Liquids.....	2-12
Figure 2-10 Conceptual Diagram of Multiphase Flow at a Dynamic Underground Stripping Project.....	2-13
Figure 2-11 LNAPL in Soil, Saturation vs. Elevation, and Level in Well.....	2-14
Figure 2-12 Example of Oil Saturation as a Function of Air-NAPL Capillary Pressure and NAPL-Water Capillary Pressure.....	2-15
Figure 2-13 Typical Relationship of Relative Permeability and Saturation in Soil Partially Saturated with Air and Water.....	2-16
Figure 2-14. ISTD System Schematic.....	2-23

	Page
Figure 2-15 Schematic of Typical ISTD Well Field.....	2-24
Figure 2-16 Air Quality Control Components used in Conjunction with Conductive Heating.....	2-25
Figure 2-17 Sine Curves of Voltage vs. Time Depicting Six-phase Alternating Current.....	2-27
Figure 2-18 Voltage Potential Between Electrodes in a Single Six-Phase Heating Array.....	2-28
Figure 2-19 Three-phase Heating Pattern.....	2-28
Figure 2-20 Six Phase Heating Pattern.....	2-28
Figure 2-21 General Schematic of Six-phase ERH Treatment System.....	2-30
Figure 2-22 Example Sketch of a Steam Injection Remediation System for a Site with Both DNAPL and LNAPL, and Multiple Zones of Contamination.....	2-34
Figure 2-23 The Three Temperature Zones that Form During a Steam Flood.....	2-34
Figure 4-1 Evaluation of Site Characteristics.....	4-7
Figure 5-1 Typical Thermal Conduction Pilot-Test Layout.....	5-5
Figure 5-2 Typical Thermal Conduction Pilot-Test Cross-Section.....	5-6
Figure 5-3 Typical Thermal Conduction Pilot-Test Process Diagram.....	5-6
Figure 5-4 Laboratory Setup for One-Dimensional Steam Injection Experiments.....	5-10
Figure 6-1 Fractions of Initial Concentrations Remaining as a Function of Time at 300°C	6-5
Figure 6-2 Example of 3:1 Edge-Centered Pattern (producer well = heater vacuum well).....	6-7
Figure 6-3 Typical Heater Only Well.....	6-9
Figure 6-4 Typical Producer Well.....	6-10
Figure 6-5 Typical ERH Energy Distribution in Subsurface.....	6-15
Figure 6-6 Typical Temperature Monitoring Detail.....	6-21
Figure 6-7 Typical Steam Injection System.....	6-22
Figure 6-8 Typical ISTR Treatment Process Flow.....	6-23
Figure 8-1 Modified Monitoring Well.....	8-5
Figure 9-1 Changes in Isotopic Composition of Groundwater Contaminated with Chlorinated Organic Compounds Under Three Scenarios.....	9-6
Figure 9-2 Well F3, Changes in Groundwater Isotopic Constituents During Thermal Treatment.....	9-6
Figure 9-3 Well Ca6, Changes in Isotopic Constituents in Groundwater During Thermal Treatment.....	9-7
Figure B-1 EW-4 PCP in Groundwater.....	B-24
Figure B-2 WW-4 TCDD in Groundwater.....	B-25
Figure B-3 S-14i, PCP in Groundwater.....	B-25
Figure B-4 S-14i, B(a)P in Groundwater.....	B-26
Figure B-5 S14i, TCDD in Groundwater.....	B-26
Figure B-6 Site Map.....	B-27
